

CASE REPORT

Problem:

In the past month of my college life, I have noticed a big problem in the mess system at Panjab University and as well as in my hostel mess(Maharana Pratap Hostel Sector 25 Chandigarh)

A man is standing in the mess with copy and pen writing the names of the candidates (Only Hostlers) who are coming into the mess and eating.

It is difficult to write every time a candidate eats what? And many a time queue is created by that man in the Hostel to write the names of those who are eating. This also leads to mistakes as he sometimes writes the wrong room number.

He doesn't write the names of outsiders (Non-Hostlers). Outsiders have to pay after eating in the mess, and many a time they even don't pay the money and run away after eating in the mess.

Sometimes he also marks present in his copy even if the candidate has not eaten anything, and there is no one to check whether he is marking present correctly or not.

So, this is a matter of concern nowadays but no one is taking action regarding this. Here's a solution.....

Solution:

Making the system **Digital**:

We can make a website or can build software for our university mess in which everyone can make an account by signing in.

As soon as anyone eats something from the mess, a bill will be generated in his account saying that...

"Thank you for ordering this item, your total is RS __, and your sum total that you have eaten till now is RS __."

Time for completing dues is before or on DATE ____, otherwise, you will be charged according to this ____.

THIS WILL MAKE THE SYSTEM TRANSPARENT.

“ALL THIS CAN BE ACHIEVED WITH THE HELP OF COOPERATION OF THE SYSTEM”

“I WANT TO WORK WITH THIS PROBLEM”

“I HOPE THAT YOU FEEL THE SAME”

THANK YOU
